Education

Alma Mater Studiorum - University of Bologna

Master in Engineering and Computer Science

September 2025 - Ongoing

Cesena, Italy

Alma Mater Studiorum - University of Bologna

Bachelor in Engineering and Computer Science

September 2021 - March 2025

Cesena, Italy

Experience

Full Stack Developer

February 2025 – November 2025

Optit Srl

Cesena, Italy

- Engineered a custom DTO-to-Entity conversion framework tailored for logistics domain models, achieving a **30% increase in conversion speed** through optimized mapping and querying logic
- Implemented **Bitbucket CI/CD pipelines** to automate building, testing (JUnit), and packaging, including a custom notification system for automated client-specific status updates
- Developed a suite of **JUnit parameterized tests** to validate complex logistics optimization models, ensuring expected behaviour across diverse edge-case scenarios.
- Enhanced platform scalability by implementing a **multi-tenant architecture** using multiple data sources
- Refactored legacy backend architecture by eliminating redundant layers and automating code generation/modifications using **JavaParser**, significantly reducing boilerplate and development time

Thesis Intern – Research Assistant

April 2024 – August 2024

Alma Mater Studiorum - University of Bologna

Bologna, Italy

- Curated a novel visual dataset based on MENSA IQ tests to evaluate LLM reasoning; automated data extraction using **Selenium** and **Beautiful Soup**, and processed images via **Keras** and **Pytesseract**
- Benchmarked several **open-source LLMs** using **prompt engineering** techniques to assess logical problem-solving capabilities and model explainability

Projects

QuizWiz | *Android, Kotlin, Jetpack Compose*

- Developed an Android app using Kotlin and Jetpack Compose, allowing users to create and share quizzes on various topics
- Implemented user following, quiz saving, and gamification features with progress tracking through graphs
- Followed the MVVM pattern to ensure a scalable and maintainable architecture

StyleSwipe | *HTML, CSS, JS, Bootstrap, PHP, MySQL*

- Built a social network for creating and sharing outfit images using HTML, CSS, and JavaScript for the frontend
- Developed a PHP-based backend, enabling users to like, comment, and save outfits
- Integrated the platform with a MySQL database to manage user data and content

WheatYieldPredictor | *Python, Jupyter, Numpy, Pandas, Scikit Learn, Flask, HTML, CSS, JS*

- Developed a regression model to predict wheat yield based on factors like rainfall, temperature, population, country and pesticide use
- Utilized pandas for data organization, matplotlib for visualization, and performed feature engineering
- Experimented with models including XGBoost, CatBoost, Lasso, Ridge, and Elastic Net, using grid search for finding the best parameters
- Built a web interface using HTML, CSS, and JavaScript, with Flask for the backend, allowing users to interact with the model

Technical Skills

Programing Languages: Java, Typescript, Python, Kotlin, C, PHP

Front End: HTML, Javascript, CSS, React.js, Angular

Back End: Node.js, Express.js, Spring Boot, MySQL, Postgres

Technologies: Git, Gradle, Docker, Docker Compose, Figma

Languages Italian (native), Romanian (native), English C1
